

H.E. Anderson C O M P A N Y

WHERE LEGACY FUELS GROWTH

Since 1955, the H.E. Anderson Company has delivered reliable, precision chemical injection solutions for the horticultural industry. Known for durable pumps and innovative systems, the company manufactures professional-grade water treatment equipment, including injection systems, controllers, and monitoring devices. Proudly made in the USA, every product is engineered for performance, efficiency, and long-lasting dependability.

J Pro

Ratio : Feeder[®] Injection System

Our J Pro Ratio:Feeder[®] Injection System is an automated nutrient and chemical injection controller designed for growers of all scales.

With the J Pro, growers can instantly adjust rates and ratios on the fly, maximizing flexibility without interrupting operations or recalibrating the system- allowing for faster response to changing conditions and crop cycles exactly when it's needed most.

TIME PROVEN
GROWER TESTED

MADE IN USA

J Pro Features:

- Offers positive displacement and volume proportioning
- Configurable for monitoring or control through EC and pH probe readings
- Engineered for minimal pressure loss
- All units are custom tailored to your specific flow rates and application requirements
- Low maintenance design for reliable long term performance
- Expandable system architecture to grow with your operation

All units are available fully pre-assembled for quick installation, or as individual components for convenient on-site customer assembly
